

LEATHER BALSAM – Colorless & color

Developed to meet the expectations of consumers concerned with ecology, its unique formula contains beeswax and organic jojoba oil. 100% of ingredients are of natural origin. It contains 58.35% (colorless) and 53,15% (brown & black) of certified organic materials. The foam applicator is based on vegetable oils.

BIOPROLINE Leather Care Balm nourishes, protects, revives color and helps waterproof leather, while restoring its softness and original appearance.

Its non-greasy formula allows leather to absorb immediately. It can be applied both on a sofa and on a car interior with no risk of staining clothes. It is also safe for your pets.

INSTRUCTIONS OF USE

1. **Lightly impregnate the application sponge** provided by tapping on the product. Very little product is enough for a good application. If necessary remove the excess material by scraping the sponge on the rim of the pot. For dirty or stained leather, clean before application with a dry cloth or at best with Bioproline Leather Cleaner.
2. **Gently pass the applicator over the leather, without rubbing or buffing.** Bioproline balm will be quickly absorbed. Before treating the leathers, **first try on a hidden part** (under a sofa, lining of a jacket ...)
3. If you have applied too much balm, use a dry cloth to remove the excess material.
4. Can be used on shoes, leather clothes, car interiors, bags and luggage, hiking equipment, barbours, raw wood, vinyl...

PRECAUTIONS

CAUTION: Do not use on suede and nubuck.

KEEP OUT OF REACH OF CHILDREN.

Keep away from heat and light
