

Kit Sneakers BIOPROLINE

This maintenance kit for sneakers and sports shoes has been specially designed to **clean** and **waterproof** all types of sports shoes. There are a large number of shoes on the market which are manufactured with two, three or even 4 different materials which can combine fabric, suede, nubuck, fabric and synthetic materials.

THIS KIT contains:

1 leather, suede, nubuck and fabric Cleaner 150ML

1 leather, suede, nubuck and fabric Protector 150ML

1 FSC wood with natural hair brush

The foam from the Bioproline sneakers cleaner will thoroughly clean any material from your favorite sports shoes. Once cleaned, you just have to spray widely the protector. Thanks to its anti-stain and water-repellent properties, it will protect your sneakers from rain and dirt.

INSTRUCTIONS

Sneaker cleaner

1. Press the pump to obtain a ready-to-use foam. Use a sponge or a small soft brush and rub gently on the spots to be removed.
2. Rinse with clear water and allow to dry.

Sneakers Protector - Once the sneaker cleaned and dried

1. The application surface must be clean, completely dry and free of any detergents or cleaner residue. If cleaning with detergent, it is imperative to rinse the object with hot water and let it dry before application.
2. Spray widely until the surface of the material is completely saturated. Use the brush to help the solution penetrate.
3. Allow to dry for 24 hours. The coating does not fully adhere until it has dried for 24 hours. You can accelerate drying near a heat source. (Radiator or dryer)
4. Better use and apply before the first use of your sneaker.

The waterproofing and stain-resistant properties will only appear after complete drying. They protection will last for at least one year. However abrasion and friction on the material can shorten this time. A new treatment will then be necessary to preserve the properties of the product.

USE
